

Rocket Espresso is pleased to announce the release of the new Giotto and Cellini domestic espresso machines for 2008.

Our research and development, and customer feedback, has led to our new machines being developed in the tradition that is Giotto and Cellini; Offering premium domestic espresso machines to those passionate about producing the finest espresso possible.

Andrew Meo & Daniele Berenbruch

New machine features

New steam and hot water handles

We have redesigned the steam & hot water handles. The new handles have a superior feel and have our own unique centre caps to retain the elegance that Giotto and Cellini have become known for.

Control panel

Now, a low water level in the reservoir is indicated by the flashing of the power lamp. Of course the pump is still disabled should the water level become critical. Additionally we have a new pressure gauge with a large 68mm diameter, a stronger and more robust ignition switch.

Newly designed feet

New and redesigned feet. 125mm of surface contact area on each foot ensures the stability of the machine. The machines now sit at a height of 30mm which enhances the visual presence of both the Giotto and Cellini.

Drain tray modifications

New drain tray lines now follow the contours of the machines, adding to the elegance that is Giotto and Cellini. Drain trays now slide out to eliminate water slop when being emptied.

Commercially specified pressure stat

At last a domestic espresso machine that has a pressure stat with the accuracy of 0.035 degrees. Temperature control as good as it gets, with the addition of a fully commercial pressure stat. Technology that in the past was reserved for commercial machines only.

Enhanced temperature control

We have increased the diameter of both the inlet and outlet group pipes which increases water circulation and aids thermal retention within the group. Now Giotto and Cellini feature group circulation pipes of 10mm. We have also fitted a restrictor into the group inlet tube, which adds control and stability to the group water temperature.

New cup frame surround

The retro beauty of the famous espresso machines of the 50's and 60's has been retained with the Giotto and Cellini cup frames. The new cup frame has a thickness of 5,5 mm and is now firmly secured in four fixing points.
